

WHY ARCHIVE WITH DEFENDER?

Every good reason to archive email is a great reason to choose ArcMail Defender.

Whatever your issues with email . . .

- **You have (more and more) mail.** Email volume and file sizes keep growing, piling up on your mail servers and user desktops.
- **Your business-critical and confidential email is “all over the place.”** It’s on your email servers, back-up tapes, desktops, and is frequently incomplete, misplaced, deleted and unsecured.
- **Regulatory and Legal Compliance.** You have to secure and be able to quickly produce emails to comply with Sarbanes-Oxley, the new Federal Rules of Civil Procedure, the Freedom of Information Act or HIPAA.
- **Your employees have better things to do than file, store and hunt for email.** They drag it from their overstuffed mailboxes to hard drives, flash drives and CDs, stash it in home offices and leave it in places you’d rather not think about.
- **Your IT department doesn’t have the bandwidth for complex software archiving solutions that require additional hardware and software, network integration and user support.**
- **You want to avoid licensing and monthly service fees that come with software and hosted archiving solutions.**

ArcMail has the answer.

Defender gives you up to 12TB of onboard storage to automatically archive all email and attachments.

Centralized archiving for all. Defender automatically captures a copy of all incoming, outgoing and internal email and attachments and indexes and stores them in a single rack-mounted or desktop appliance. *Import* function lets you add past emails and *Export* allows for easy consolidation and distribution of archived emails.

RAID disk management ensures compliance with secure, fault-tolerant storage of all required records. Users have permission-based access to emails but cannot alter or delete any content.

Haphazard user-archiving is a thing of the past. Secure, centralized archiving on Defender with search function users launch from their desktops lets them make the most of their email time.

Nothing else to install. Fast and easy setup. Simply use your standard network configuration and set the journaling function on your mail server.

With ArcMail, you purchase only what you need. No per-seat licenses or monthly hosting fees.

Defender: Complete email archiving and management.

5 Reasons the IT Department will love Defender

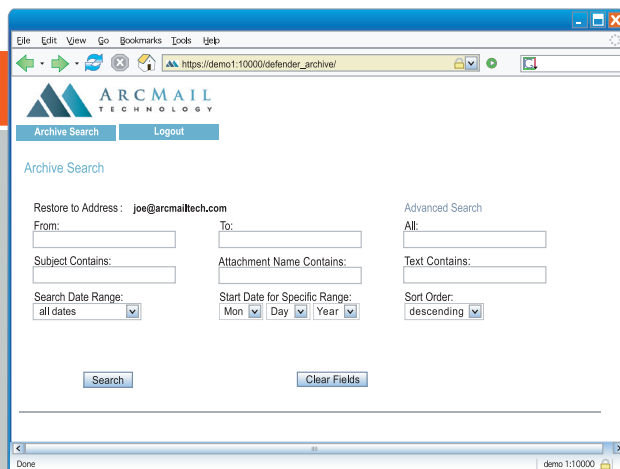

- **Everything's onboard**
Up to 12TB of storage, data compression and disk management software. No additional hardware or software to buy, install, integrate and maintain.
- **Simple setup**
Just standard network configuration and setting the journaling function on your mail server.
- **Better mail-server performance, faster network back-ups**
Onboard storage for up to 80 million emails keeps old mail off the server.
- **No help calls, hand-holding or hunting through back-up tapes**
Users can launch Defender's simple, intuitive web-based search function directly from Outlook or their web browser to find emails and attachments in seconds.
- **Data integrity encryption and multiple security levels**
Allows individual or universal access to data, while preventing content from being altered or deleted.

FIND IT FAST!

Defender's robust search function makes it easy for users to find email and attachments in seconds. Search on common display names and email addresses in the *To*, *From*, and *cc* fields. Search for words in the message *Subject* line, body text, attachment names, extensions and text.

Defender's Search and Restore function can save the day if...

- You have to find old email to comply with Sarbanes-Oxley, the new Federal Rules of Civil Procedure, the Freedom of Information Act or HIPAA.
- A customer wants to renew an order based on terms your former sales rep quoted in an email, and that email is ... where?
- Your boss calls and asks for your opinion of a presentation she emailed to you two weeks ago, which you haven't looked at yet....
