

OVERVIEW

UNLOCK YOUR NETWORK YET MAINTAIN SECURITY

Securing your network is a top priority. Giving users administrator rights can create security risks, but must be weighed against constant help desk calls to allow basic apps like upgrading Adobe® Reader®, Java, or simply changing the time zone.

Even organizations that have deployed Microsoft® Windows® 7 must manage user privileges for Administrator Rights, but may have constrained budgets.

Up until now, available privilege management solutions were typically as complex and expensive as robust desktop management tools.

SIMPLE AND EFFECTIVE PRIVILEGE MANAGEMENT FOR LESS

Now Privilege Authority Professional provides the core functions IT administrators need at a much lower price point than its competitors. It increases productivity by reducing recurring help desk calls, enabling IT administrators to automate user privilege settings to keep users working, and help desk staff focused on higher priority tasks, as well as identify unused licenses to negotiate seats realistically, for exceptional ROI.

A VALUABLE PRIVILEGE MANAGEMENT SOLUTION

The IT department is tasked with keeping the computing infrastructure running and secure. Users don't want to get stopped in their tracks while doing their jobs. Avoid irritating users; let them install legit apps with Privilege Authority, and help reduce help desk calls for minor reasons. Privilege Authority uses Least Privileges principle for access to Administrator Rights, while maintaining the controls needed to protect the network yet allow limited access.

Privilege Authority®

The Low-Cost Key to Windows Privilege Management

Privilege Authority® Professional lets IT Admins elevate and manage user rights quickly and precisely with ScriptLogic's patented and powerful Validation Logic targeting technology. Use included, shared privilege rules from the Privilege Authority Community or create your own rules and allow access to just the applications, Windows processes, and ActiveX® controls you deem safe.

KEY BENEFITS

EFFECTIVE MANAGEMENT OF USER PRIVILEGES

For managing Windows clients with Administrator rights, Privilege Authority Professional is ideal. Avoid the pain of managing each user situation by elevating specific privileges with rules.

QUICK DEPLOYMENT

Get immediate time-saving benefits by applying pre-defined privilege rules that are included with Privilege Authority Professional. Pre-defined rules provide for the most common needs, such as elevating privilege for downloading all Microsoft products.

SCALABLE

Privilege Authority Professional expands as you need it; in addition to including pre-packaged rules, it easily supports the creation of custom rules and importing from the online community at the Privilege Authority Rules Exchange.

APPLIES FILTERS OR CONDITIONS TO PRIVILEGE RULES

ScriptLogic's Validation Logic enables rules to be targeted to Windows clients based on Boolean Logic statements. Apply rules based on elements such as Operating System, IP Address range or Active Directory elements.

USE CASE SCENARIOS FOR KEY PRODUCT FEATURES

Core Privilege Management Functions

- Central management console
- View, select and deploy common or pre-defined rules attached to GPOs
- View, select and deploy custom rules attached to GPOs
- View and assign rules to specific clients, domains or OUs using Active Directory

Pre-defined Common Rules

- Change system date and time
- Allow Java Runtime updater to run as Administrator
- Allow Adobe Reader updater to run as Administrator

Import rules from Privilege Authority Rules Exchange

- Apply rules developed by other Privilege Authority users (see examples below)
 - Add local printer
 - Run iTunes® installer as Administrator
 - Change time zone or date/time from taskbar

Create Custom Rules

- Assign to a digital or software publishers certificate for one application or a brand (e.g. Adobe, Microsoft)
- Assign to the path of an executable program
- Assign to a folder path and apply to all processes run from the path
- Assign to an ActiveX object with a URL

LICENSING

Privilege Authority Professional is licensed per workstation.

KEY FEATURES

CORE PRIVILEGE MANAGEMENT

Select the appropriate configuration to be assigned to one or many users including printers, drives, registry settings and Outlook® profiles. Also use the Folder Redirect function as a superior alternative to roaming profiles. Configure the user's workspace from graphical menus versus writing custom login scripts.

PRE-DEFINED ELEVATION RULES

Privilege Authority Professional includes a set of commonly used rules for a quick deployment and immediate benefits.

CREATE CUSTOM RULES

Includes tools to manage the unique Administrator Rights scenarios in your company. Check for digital or software publisher certificates before elevating rights. Imports rules from Privilege Authority Rules Exchange as needed to expand the privilege management capabilities even further.

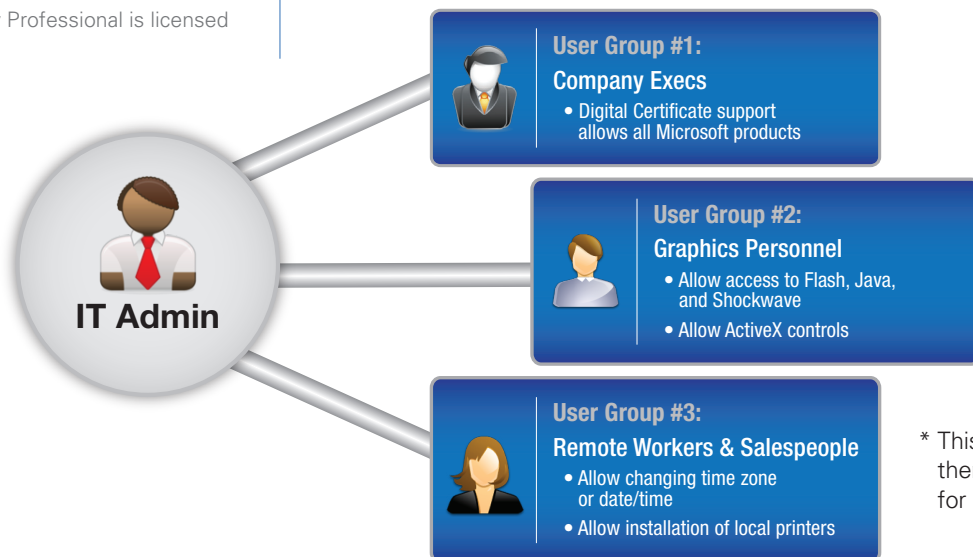

VALIDATION LOGIC TECHNOLOGY

Patented Validation Logic is the targeting engine from ScriptLogic, integrated into Privilege Authority Professional for quick and consistent application of privilege elevation rules.

COMPLETE WINDOWS NETWORK SUPPORT

Integrates seamlessly with Microsoft network environments using Group Policy Objects and Active Directory. Each privilege elevation rule is associated and deployed using a Group Policy Object and can be viewed from Group Policy Management Console.

* This is just one scenario, there are numerous possibilities for elevating privileges.
